This enlightening book, a sequel to QUIPS, QUOTES, AND QUANTA, helps readers to understand how physicists think about and look at the world. Starting with the discovery and investigation of cosmic rays, the book proceeds to cover some major areas of modern physics in laymen's terms. Unlike other books that deal with the history of physics, this volume concentrates on anecdotes about the physicists who created the new ideas, with a heavy emphasis on personal incidents and quotes. At the same time it presents, in every day language, the ideas created by these physicists. Both thematic and biographical in nature, readers will be entertained with humorous events in the lives of some famous scientists. Readers will also learn quite a lot about modern physics without the mathematical details, but with the important concepts intact.

Physics in Focus has set a new standard for supporting the New South Wales Stage 6 Science syllabuses. Each text aims to give physics a new relevance for your students and motivate them to succeed in this challenging course. Physics in Focus uses the dot point approach, ensuring all syllabus content is covered logically, and integrates first-hand and secondary source investigations throughout. The series emphasises the contexts formed by the PFAs and provides specific examples relating to these broader issues to increase understanding. The accompanying eText enhances the learning experience with extra resources such as animated simulations, worked examples and further mathematical work relating to the Solve and Analyse dot points. Also included are module and option Mind Maps, videos demonstrating surgical procedures and answers to all chapter questions.

The Cambridge HSC Physics Study Guide is a review of the revised HSC Physics course.

Contains a comprehensive summary of the entire course, activities, glossary of terms and a list of websites.
