Radiation Oncology: A Question-Based Review is a comprehensive active learning tool for medical students, residents, and junior attending physicians in radiation oncology. The first question-and-answer review book in this field, it will help professionals quickly and efficiently review specific topics in clinical radiation oncology. It is also an ideal preparation tool for written and oral board examinations. Organized in chapters and sections by site, the book covers in detail all the sites and cancer types currently treated with radiotherapy. Emphasis is on treatment recommendations and the evidence behind them. Detailed questions are also included on the natural history, epidemiology, diagnosis, staging, and treatment-related side effects for each cancer type. A companion website will have an interactive question bank for self-testing.

Hematology Board Review: Blueprint Study Guide and Q&A is a concise, outline-based study guide covering all topics that appear on the Hematology Certification Exam. The book includes all topics listed in the American Board of Internal Medicine (ABIM) blueprint as essential material for the exam and highlights topic areas that are often found on the test. For hematology and oncology fellows as well as practicing clinicians needing a refresher before taking MOC, this handy study guide provides succinct overviews of all blood disorders, syndromes and diseases with practice questions on the go. Each disorder or disease-based chapter provides the same structure for ease of use beginning with the epidemiology, and followed by the etiology and risk factors, signs and symptoms, diagnostic criteria, indications for treatment, prognostic factors, treatment recommendations, and special considerations. The authors provide the most accurate and up-to-date information, including well-established treatment regimens for a variety of blood disorders, including iron disorders, bone marrow failure syndromes, platelet and megakaryocytic disorders, hemostasis, thrombosis, and hematologic malignancies. Later chapters review other major subspecialty areas found on the exam including transfusion medicine and hematopoietic cell transplantation. With 200 board-style questions and answers with detailed rationales, Hematology Board Review is the go-to, quick review for any trainee preparing for initial certification and for hematologists or oncologists preparing for recertification. Key Features: Includes 200 board-style questions and answers with rationales Provides key point summaries of each topic area for quick study and easy recall Thorough coverage of hematologic malignancies, blood disorders, transfusion medicine, hematopoietic cell transplantation, and standard treatment regimens Tables providing key data and information related to staging, treatment options, and disease classifications

Based on: DeVita, Hellman, and Rosenberg's cancer / editors, Vincent T. DeVita Jr., Theodore S. Lawrence, Steven A. Rosenberg. 9th ed. c2011.

For those preparing for certification or recertification in hematology or oncology, Hoffman and Abeloff's Hematology-Oncology Review is a single-volume source of authoritative, up-to-date exam preparation. This unique question and answer review helps you succeed on today's board exams with more than 1,000 board-style questions, answers, and rationales; comprehensive coverage of essential exam topics, and online practice tests. Includes 1,000+ board-style questions with answers and rationales explaining both correct and incorrect answers. Covers a broad range of topics compiled by experts in hematology and oncology, including cancer biology and genomics, immunotherapy, hematologic malignancies, solid tumor malignancies, non-malignant hematology, and supportive care. Uniquely designed as both a standalone review and a study companion to Abeloff's Clinical Oncology and Hematology: Basic Principles and Practice.

This book offers a comprehensive introduction to translational efforts in breast cancer, addressing the latest approaches to precision medicine based on the current state of understanding of breast cancer. With the latest developments in breast cancer research, our understanding of the genomic changes and the oncogenic signaling cascade of breast cancer has made considerable strides. Further, the immuno-environment has been demonstrated as the barrier to clinical cancer. In addition, major advances in cancer biology, immunology, genomics and metabolism have broken new ground for designing therapeutic approaches and selecting appropriate treatments on the basis of more precise information on the individual patient. As a result of these two trends, a clearer picture of the molecular landscape of breast cancers has facilitated the development of diagnostic, prognostic and predictive biomarkers for clinical oncology. All these aspects are addressed in this volume, which offers a comprehensive resource for researchers, graduate students and oncologists in cancer research.

Radiation Oncology Question Review efficiently tests and reinforces your knowledge of key concepts, critical studies, and major clinical guidelines, with the most important radiation oncology citations included. Organized
