

C13 Structural Steel Design For Buildings

[GO TO DOWNLOAD PAGE](#)

Guide Design Specification for Bridge Temporary Works, Glass & Interactive Building Envelopes, Tentative provisions for the development of seismic regulations for buildings, Structural evaluation of steel faced sandwich panels, Structural Steel Drafting and Design, Calendar, Architecture Timed, Modern Steel Construction, NBS Building Science Series, Commentary on the Prescriptive Method for Residential Cold-Formed Steel Framing

" The main objective of the COST Action C13 was to increase the knowledge of properties and possibilities of glazing in order to increase the performance of building envelopes, to reduce the energy consumption and to improve the quality of life with respect to interior space, impact on the environment and human welfare. This collection of papers, presented at meetings and workshops of the COST C13 working groups 1 (Architectural Aspects and Design Integration), 2 (Quality of Interior Space) and 3 (Structural Aspects of Glass) are the result of five years of exchange of ideas, experiences and know-how between members, delegates and experts. It represents the body of knowledge from a restricted but representative group of professionals in Europe on the subject of glass building envelopes. The Steel Structures Laboratory at Ecole Polytechnique Fédérale de Lausanne and the research group Façades & Systems of the Faculty of Architecture at Delft University of Technology have taken the initiative to publish these COST C13 papers in order to disseminate the knowledge to the world of glass façade professionals and to contribute to the development of a new generation of high-performance glass building envelopes. "

Practical and easy to use, this text lays a solid groundwork for beginning and intermediate students to pursue careers in architecture, construction, or civil engineering. The text clarifies the vital interdependence between structural steel design and fabrication drawings, equipping students to work flexibly with both. First and foremost a drafting book, Structural Steel Drafting and Design gives an overview of structural design theory while providing numerous examples, illustrations, and real-world assignments. Students also become acquainted with critical tables and reference material from industry-standard sources, as well as the merits of Load and Resistance Factor Design and Allowable Strength Design. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

"Explores the role of ideas about time in the design inclinations and choices of contemporary designers of the environment. Contributors consider how the new can be incorporated into the old; how designing for the very short term has significant advantages; how what is temporary can be re-used; and how the design of materials, buildings and landscapes can improve sustainability and enhance experiences of time passing. Many designers have replaced the ideal of 'timelessness' and the view of time as a series of singular, static moments with an enriched and more nuanced perspective, treating time as a source of inspiration to be embraced, not a condition to be defended against."

Use of cold formed steel framing in the residential market has increased over the past years. Its price stability, consistent quality, similarity to conventional framing, successes in the commercial market, & resistance to fire, rot, & termites have attracted the attention of many builders. However, lack of prescriptive construction requirements has prevented this alternative material from gaining wider acceptance among home builders & code officials. This handbook provides background, engineering assumptions & methods, & detailed calculations for this method. Illustrated.
