Nanomaterial, The Ultrastructure of the Animal Cell, Photoreceptors and Calcium, International Review of Cytology, Journal of Morphology, Acta Pathologica Et Microbiologica Scandinavica, Molecular Biology of the Cell, The Journal of Cell Biology, Zeitschrift fuer zellforschung und mikroskopische anatomie, Cytoskeleton in Specialized Tissues and in Pathological States

The rapidly developing field of nanomaterials has expanded in many commercial areas. More recent studies have begun to provide a foundation for understanding how nanomaterials influence cells and how they also can serve as methodological tools for studies in medicine and cell biology, including research into stem cells. Recent investigations have shown affects of nanomaterials on specific subcellular structures, such as the actin-based brush border network in cells with an increasing emphasis on the barrier function of epithelial tissues. While other studies have shown involvement of nanoparticles in specific cytoplasmic signal transduction events such as the rise in intracellular free calcium, a signaling event known to regulate many changes in cell architecture and function. In parallel, nanomaterials are increasingly used in medicine for drug delivery, treatment of cancer and an increasing number of new applications. This book investigates these areas and also includes new methods for assessment in cell biology and medicine.

The Ultrastructure of the Animal Cell examines the ultrastructure of the animal cell, with emphasis on the chemical, biochemical, and physiological aspects of the cell. Discussions are organized around the interphase cell and cell division and cover topics ranging from the general structure and molecular models of cell membranes to the ultrastructure of the nucleus and the cytosome. Changes in cell ultrastructure during embryogenesis, differentiation, and secretion are also considered. This monograph is divided into nine chapters and opens with an introduction to the principles and techniques of electron microscopy. The next section is about the interphase cell and first presents an overview of the animal cell before proceeding with an analysis of the ultrastructure of the nucleus and the cytosome, paying particular attention to the plasma membrane and associated structures; the hyaloplasm; endoplasmic reticulum; the Golgi complex; and mitochondria. The changes that occur in the ultrastructure of the cell during embryogenesis, differentiation, and secretion are also described. The last section focuses on cell division and the ultrastructure of the dividing cell. This text will be a useful resource for cell biologists, biochemists, and physiologists, as well as students and teachers of biology, biochemistry, and physiology.

Text reviews the understanding of the role of calcium in phototransduction, dark-and light-adaptation, recovery from bleaching and return from the dark state, and synaptic signaling of photoreceptors and their second-order neurons. Includes color plates.

International Review of Cytology presents current advances and comprehensive reviews in cell biology - both plant and animal. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research. Articles in this volume include Cell Proliferation in pathogenesis of Oesophagogastric Lesions in Pigs; Molecular Mechanism of Phase-I and Phase-II Drug-Metabolizing Enzymes: Implications for Detoxification; Effects of Growth Factors on Testicular Morphogenesis; Flagellar Length Control in Chlamydomonas - a Paradigm for Organelle Size Regulation; and Molecular Mechanism and Evolutional Significance of Epithelial-mesenchymal Interactions in the Body- and Tail-Dependent Metamorphic Transformation of Anuran Larval Skin.

No. 2, pt. 2 of November issue each year from v. 19-47; 1963-70 and v. 55- 1972- contain the Abstracts of papers presented at the annual meeting of the American Society for Cell Biology, 3d-10th; 1963-70 and 12th-1972- .

This volume deals with aspects of the cytoskeleton in different cell types and also describe examples of changes in the cytoskeleton which occur during various pathological states. These studies bring the exciting area of cytoskeleton research into the domain of medical science.
